

DustCube Tornado

Dust Suppression Specialists

Designed and built in the UK, the DustCube Tornado is used in the management of Dust to suppress and control particulates, which is vital to protect human & animal health and well-being.

Applications for use include: demolition, ground remediation, bulk material handling, waste transfer and landfill, crushing and screening, bio-fuel processing, construction, Mining and quarrying, aggregates, manufacturing and many more applications.

Features and Benefits

- Portable, mobile and fully contained for convenience and ease of operation
- Latest Atomiser technology for ultra fine mist, to maximise particle pull down
- Quality components for sustainability and reliability
- Optimised design and performance for minimum fuel and water consumption
- 20 Micron particle size to prevent excess water saturation

Product Dimensions / Weight			
Overall Length:	5.9 Metres	Overall Width:	1.83 Metres
Height to top of Cannon	2.59 Metres	Weight:	1500 KG
Supplied with Lifting eyes and fork pockets			
Water Tank	On Skid or Bowser	Bowser	Other Features
Capacity:	1000 Ltrs	2000 Ltrs	Manual Drain & Pump protection
Available on Twin axel trailer or skid unit			
Cannon Performance		Water Consumption:	Maximum 30 LPM
Water Throw	60 Metres	Water Droplet Size:	20 Micron
Other Features	Manually operated cannon rotation angle and tilting angle settings.		
Fuel / Power Requirement		Diesel Generator or 400V Electricity
